

# Vegayan Systems

Making core networks efficient and effective

Vegayan Systems Private Limited is a premiere supplier of advanced networking products and integrated solutions which enhance the functionality, performance and management of core IP/MPLS networks. It provides software overlay solutions which encompass network operations, traffic engineering, analysis, planning and service provisioning. Vegayan offers solutions for both service provider and enterprise networks.

Vegayan is led by Dr. Girish Saraph, a professor at IIT Bombay, and is headquartered in SINE business incubator at IIT. The key strengths of Vegayan include its talented team, innovative technology (with international patents), unique product vision and growth strategy. It has excellent visibility into global markets through its internationally reputed advisors, investors and partners. Vegayan has won many awards at TIE-DFJ, DST-Intel and TIE-Canaan Partners contests.

## SiMPLuS<sup>®</sup> : Unleash the power of MPLS

Vegayan's SiMPLuS suite of products enhances functionality, performance and management of IP/MPLS networks. SiMPLuS brings simplification to the deployment, operation, management and planning of IP/MPLS networks. SiMPLuS also provides a scalable service provisioning platform for deployment of various next-gen services over MPLS.

### SiMPLuS<sup>®</sup> OP&TE Solution

SiMPLuS OP&TE, Operations and Traffic Engineering solution from Vegayan, provides a centralized platform for IP/MPLS network owners to achieve :

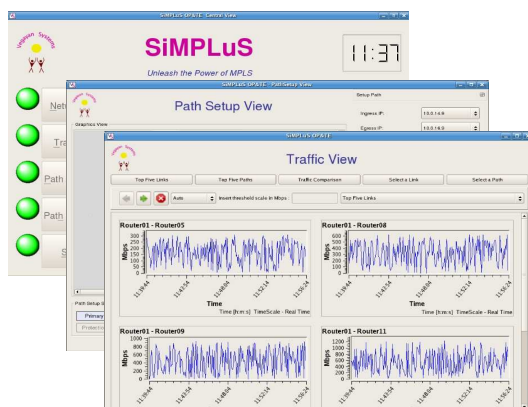

- Quality** : QoS support for converged (triple-play) services
- Optimization** : Effective and optimal use of network resources
- Intelligence** : Path selection based on quality and network constraints
- Reliability** : Real-time monitoring enables proactive network management
- Performance** : Routes traffic to avoid congestion and delay
- Resiliency** : Efficient recovery from fiber-cut failures
- Scalability** : Managing thousands of tunnels in large networks
- Manageability** : Ease in network management and planning

#### Key Benefits

**Reduced CAPEX:** Efficient network utilization

**Reduced OPEX:** Proactive network management

**Improved ROI:** Ease of new services roll-out
