

About SiMPLuS:

Vegayan's SiMPLuS Suite is a broad-based, versatile solution platform with many USP's and value propositions. It provides advanced products for next-generation IP networks and technologies delivering different types of specialized services. Vegayan's product capabilities and technical expertise provides strong value proposition to telecom companies rolling out services in a large, complex and sophisticated, multi-vendor and multi-service network environments.

SiMPLuS Products:

- ◆ Network Discovery & Topology
- ◆ Fault Management & RCA
- ◆ Performance Management & Service Assurance
- ◆ Configuration Management & Service Provisioning
- ◆ Enterprise Service Delivery Management
- ◆ Unified EMS for Mobility & Edge Devices

◆ Network Discovery & Topology

Lock-in step representation of dynamic network through its unique network discovery and validation resulting in "as-is" network view with accurate capture of dynamic state and service overlays.

◆ Fault Management & RCA

Accurate capturing of fault events and alerts across network elements, IP topology and service overlays delivering operational efficiency. Quicker event correlation & drill-down analysis.

◆ Performance Mgmt. & Service Assurance

Proactive control of overall network health, availability and performance through intuitive web reports. Real-time adaptive threshold alerts and performance dashboards.

◆ Configuration Mgmt. & Service Provisioning

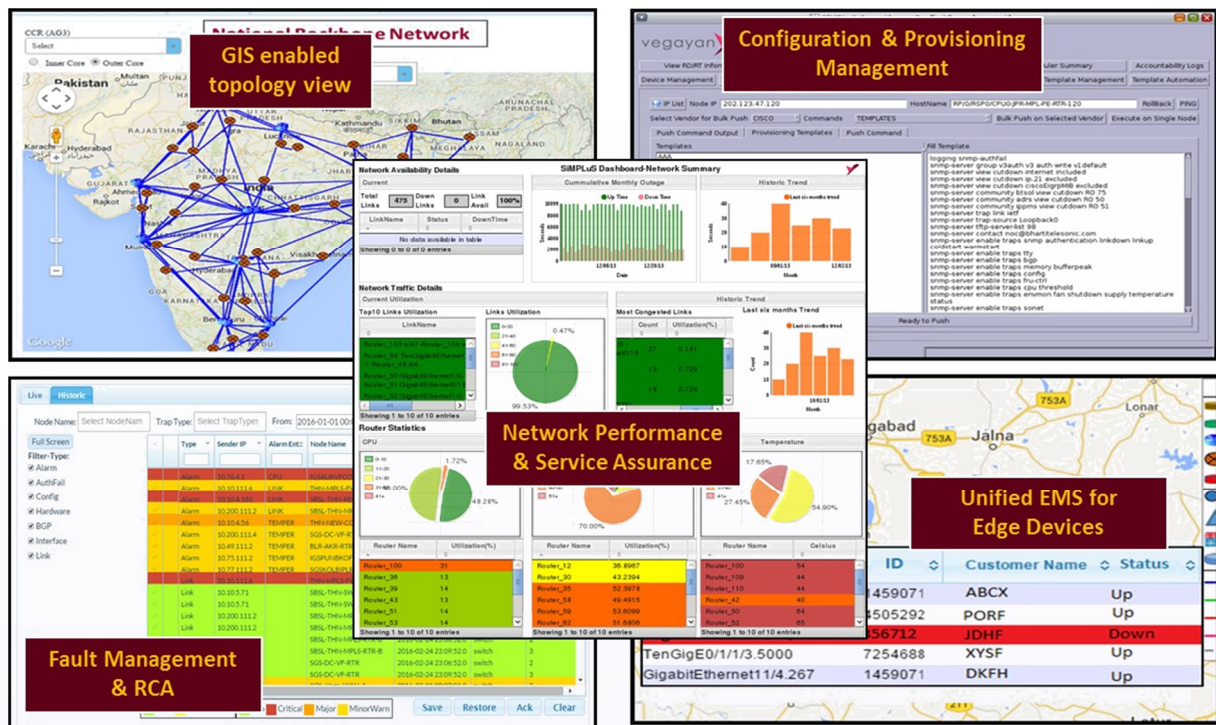

Single platform to support configuration, provisioning, policy adherence and access control across multi-vendor networks. Automation of provisioning & policy implementation through templates.

◆ Enterprise Service Delivery Management

Platform for service providers to meet the critical demands of enterprise customers to monitor and manage CPEs and services over leased links. Proactive network performance visibility through dedicated Customer Portal.

◆ Unified EMS for Mobility & Edge Devices

A single platform solution for unified network device management of multiple device-types vendors & technologies for various services-mobility, broadband, enterprise...

About Vegayan:

Vegayan Systems is a premier provider of advanced networking products and integrated solutions for global service providers and enterprise customers. Vegayan leads the industry in providing solutions for managing next-generation networks. Spun out of groundbreaking research into MPLS networks at IIT, Vegayan has remained on the cutting edge of nextgen network technology.

Vegayan innovation has received numerous awards, including awards from Intel, Indian Department of Science and Technology (DST), National Association of Software and Services Companies (NASSCOM) and The Indus Entrepreneurs (TiE).
